

Pursuing a **Minor** degree in **Artificial Intelligence** and **Data Science** from **C-MInDS, IIT Bombay**

SCHOLASTIC ACHIEVEMENTS

- Achieved **99.81 Percentile** in **JEE-Main** out of over 1 million candidates (2021)
- Secured **All India Rank 1207** in **JEE-Advanced** out of over 0.14 million candidates (2021)
- Secured **AP grade** for excellent performance in **PH 108**, awarded to 27 out of over 1300 students (2022)
- One of the **17 out of 1400+** students to secure a **Branch Change** to the department of **CSE** (2022)
- Secured **AIR 275** in the prestigious **KVPY SX** and awarded fellowship by **IISC Bangalore** (2021)

WORK EXPERIENCE

Applied AI Researcher at Brance Technologies

(Summer 2023)

- Developed and implemented performant chatbot systems using **vector embeddings** for data retrieval and **Large Language Models** for question-answering, resulting in significantly improved user experience and engagement
- Utilized **Haystack** framework and **FAISS** to efficiently index and store proprietary data, leveraging **vectorDBs** to store the embeddings. Utilized **Hugging Face models** to form the entire **retrieval pipeline**, including **document reranking**, resulting in improved relevance and accuracy of the retrieved information for chatbot responses
- Implemented **Locality-Sensitive Hashing (LSH)** to create a highly **performant caching system** to cache user queries that utilizes **semantic search**, optimizing the speed, accuracy, and efficiency of data retrieval for chatbot
- Leveraged **Nginx** and **FastAPI** on an **AWS EC2** instance to ensure seamless communication, and reduced latency for the chatbot system. Utilized **async calls** and FastAPI's scalability for smooth data retrieval and processing

KEY PROJECTS

Stable Diffusion from Scratch

(Summer 2023)

Self Project

- Used **PyTorch** to independently develop and implement **each component** of a **Stable Diffusion** model on smaller datasets before using the **Hugging Face's diffuser** library to implement the final diffusion model on a larger dataset
- Implemented a **Variational Autoencoder (VAE)** and trained it on the **Fashion MNIST** dataset using **reconstruction loss** and **KL-Divergence loss**, enabling accurate reconstruction of inputs and latent space interpolation
- Implemented a **Diffusion U-Net** architecture with **timestep embeddings** and **self-attention** and used it to implement both unconditional and conditional **DDPM(Denoising Diffusion Probabilistic Models)** on the **CIFAR-10** dataset. Also used **various sampling techniques** to improve the quality of the generated images
- Implemented **latent diffusion** by utilizing the **diffuser's VAE** to encode images to **latent representations**, and subsequently trained a **DDPM** on these latents using the **LSUN churches and bedrooms datasets** to generate high-quality images. Used **FID(Fréchet Inception Distance)** scores to evaluate the quality of the generated images

Discrete Event Simulator for Bitcoin Network

(Spring 2023)

Guide: Prof. Vinay J. Ribeiro | Course Project : Introduction to Blockchains and Smart Contracts

IIT Bombay

- Implemented a DES for the Bitcoin Network and **analyzed the forking** and length of the main chain. Additionally, simulated **selfish mining and stubborn mining attacks** on the network by an adversary node and analyzed the **adversary's relative profitability** under various factors such as hashing power, number of nodes and latency etc.
- Utilized the **Networkx** library to create a connected **P2P network** and generated visual representations of the blockchain. Used the **SimPy** library to maintain a **global clock** and simulate the **mining and transaction events**

Layer 2 DAPP for Lightning Network Simulation

(Spring 2023)

Guide: Prof. Vinay J. Ribeiro | Course Project : Introduction to Blockchains and Smart Contracts

IIT Bombay

- Developed a Layer 2 DAPP on the Ethereum blockchain, utilizing **Ganache/Truffle** to set up a **local Ethereum node**. Implemented the smart contract in **Solidity**, enabling the execution of transactions within the Layer 2 DAPP and facilitate the simulation of **Lightning Networks**, a Layer 2 scaling solution for the Ethereum blockchain
- Ran the simulation using an external Python script to perform various transaction scenarios and analyze their outcomes

KYC-Website

(Summer 2023)

Self Project

- Developed and implemented KYC-Website, a secure web application utilizing **Node.js**, **Express.js**, and **MongoDB Atlas** for **KYC verification**, mimicking the KYC requirements for banking and financial institutions
- Utilized the **easy-ocr** library for **ID information extraction** and the **face-recognition** library for **real-time face matching** to automate the KYC verification process, ensuring swift **verification without human intervention**
- Learned about **full-stack development** by utilizing technologies such as **Bootstrap**, **EJS**, **Passport.js** to create a user-friendly and responsive web application with **secure authentication**, **form validation** and **user sessions**
- Utilized **FastAPI** to wrap and integrate the **machine learning components** of the project, ensuring seamless communication and efficient handling of requests between the **web application and the ML API servers**

FastChat

(Autumn 2022)

Guide: Prof. Kavi Arya | Course Project : Software Systems Lab

IIT Bombay

- Developing a messaging software with **end-to-end encryption** by using **RSA+AES** to encode the messages and both **group chat** and **individual chat** support using **python socket library** and **PostgreSQL** database
- Implementing a **load balancer** with **least connect strategy** using **bash** to distribute load among multiple servers, and focusing on obtaining **high throughput** while using only **limited resources** dedicated for the servers
- Used **bash** scripts to simulate common messaging patterns and calculate **throughput** and **latency** of the system

OTHER PROJECTS

Deep Learning

(Summer 2023)

Self Project

Z3 SAT Solver

(Spring 2023)

Guide: Prof. Ashutosh Gupta | Course Project : Logic for Computer Science

IIT Bombay

- Implemented and utilized **SAT solving techniques**, specifically leveraging the **Z3 theorem prover** in Python, to formulate an effective strategy for the game **Sliding-Solver** and also handle the case of **unsatisfiability** for the game

L-TAGE Branch Predictor

(Spring 2023)

Guide: Prof. Biswabandan Panda | Course Project : Digital Logic Design and Computer Architecture

IIT Bombay

- Implemented the L-TAGE branch predictor using **champsim**, a state-of-the-art simulator in **C++** and analyzed the performance of the predictor on various benchmarking traces like **gcc**, **leslie3d**, **milc**, **perlbench** and **zeusmp**

TECHNICAL SKILLS

Programming	C/C++, Python, Bash, Solidity, Java, JavaScript, VHDL, Sed, Awk
Data Science	Tensorflow, Pytorch, Keras, Trax, Scikit-learn, OpenCV, NumPy, Pandas, Matplotlib
Software & Tools	MATLAB, Git, L ^A T _E X, Docker, Wireshark, Z3, Doxygen, Sphinx, Nginx, FastAPI
Web Development	HTML5, CSS, JavaScript, Bootstrap, jQuery NodeJS, ExpressJS, SQL, MongoDB

KEY COURSES UNDERTAKEN

Mathematics	Calculus, Linear Algebra, Discrete Structures, Differential Equations, Optimization Models, Logic for Computer Science, Game Theory and Decision Analysis
Computer Science	Data Structures and Algorithms [#] , Data Analysis and Interpretation, Software Systems Lab, Computer Networks [#] , Digital Logic Design and Computer Architecture [#] , Design and Analysis of Algorithms, Introduction to Blockchains Cryptocurrencies and Smart Contracts, Computer Vision

([#] Theory + Lab)

EXTRACURRICULAR

- Mentored two groups of students during the **SoC (Summer of Code)** program conducted by **WNCC**, **IITB** guiding them through **deep learning projects** and assisting in the implementation of cutting-edge research papers (2023)
- Successfully completed one year under **National Sports Organization(NSO)** in **Chess** at IIT Bombay (2022)
- Pitched a **Business Model Canvas** for a startup in the health sector which entailed making online ambulance bookings, for the EnB Buzz competition conducted by the **Entrepreneurship cell of IIT Bombay** (2021)
- Worked in a team of 4 to make an ESP32 **WiFi-controlled** bot for **XLR8** conducted by **ERC**, **IITB** (2022)
